RBT Mock Exam 2

The Stimulus Control Room

Name: _____ **Date:** _____

Instructions

This practice exam has **85 multiple-choice questions** modeled on the BACB RBT Test Content Outline (3rd ed.). Like the real exam, **75 questions are scored** and 10 are unscored pilot questions mixed in; you won't know which ones. You have **90 minutes**.

Each question has four choices (A to D). Choose the **one best answer**. Mark your answers on the answer sheet on the last page, then submit them online at the link in your email. Your score and the answer key with explanations will be sent after your answers and short survey are received.

Work without notes or outside help so your score reflects real exam readiness.

Content covered

Domain	Topic
A	Data Collection and Graphing
B	Behavior Assessment
C	Behavior Acquisition
D	Behavior Reduction
E	Documentation and Reporting
F	Ethics

1. Whenever a client's mother gets on the phone, the client screams, and the mother stops to say "Please be quiet." What function is most likely?
   - **A.** Escape
   - **B.** Access to tangibles
   - **C.** Automatic reinforcement
   - **D.** Attention

2. An RBT often skips steps of a written reinforcement procedure. What is the biggest risk of this poor procedural fidelity?
   - **A.** The session will take longer to document at the end of the day
   - **B.** The supervisor cannot tell whether the intervention works, because it was not implemented as written
   - **C.** The client will learn the skill faster than the treatment plan expected
   - **D.** The client's graphs will be harder for the supervisor to read, interpret, and share with the family

3. A client rocks in his chair. The plan reinforces sitting with all four chair legs on the floor. This is an example of:
   - **A.** Differential reinforcement of incompatible behavior (DRI)
   - **B.** Differential reinforcement of low rates (DRL)
   - **C.** Functional communication training (FCT)
   - **D.** Differential reinforcement of other behavior (DRO) for rocking

4. You want to post in an online RBT forum asking for advice about a client, describing his age, school, and specific behaviors, but not his name. What should you do?
   - **A.** Post it in a private group only
   - **B.** Post it, since you left out the name
   - **C.** Post it and delete it after getting responses
   - **D.** Don't post it, and ask your supervisor instead

5. Which of the following is an indirect functional assessment method?
   - **A.** A functional analysis with test and control conditions run by the RBT
   - **B.** A scatterplot filled in by the RBT
   - **C.** A structured interview or rating scale completed by caregivers
   - **D.** ABC data collected during sessions

6. A client's attention-maintained yelling was extinguished. Weeks later, it suddenly reappears briefly at the start of a session. This is:
   - **A.** Response generalization
   - **B.** Spontaneous recovery
   - **C.** An extinction burst
   - **D.** Resurgence

7. Your supervisor gives you a scatterplot to fill in throughout the day for a client's self-injury. What is this tool mainly designed to show?

- **A.** Whether the behavior tends to occur at certain times of day
- **B.** The exact function of the behavior, without any other assessment
- **C.** How long each individual episode of the behavior lasts
- **D.** The client's most preferred reinforcers across the day

8. Your supervisor changes a client's intervention from baseline to a token system. How should this be shown on the line graph?

- **A.** Start a new graph and discard the baseline data
- **B.** Draw a phase change line and do not connect data points across it
- **C.** Connect all data points across both phases so the overall trend stays continuous
- **D.** Change the color of the y-axis

9. A client had three tantrums lasting 4, 6, and 8 minutes. What is the mean duration per tantrum?

- **A.** 6 minutes
- **B.** 8 minutes
- **C.** 18 minutes
- **D.** 4 minutes

10. What is a key difference between incidental teaching and discrete-trial teaching?

- **A.** Incidental teaching never uses prompts of any kind, while discrete-trial teaching relies on them
- **B.** In incidental teaching, the learner's interest or initiation sets up the teaching opportunity
- **C.** Incidental teaching occurs only at a table, while DTT occurs during play
- **D.** Discrete-trial teaching only uses natural reinforcers from the activity

11. A client's correct responses across 8 sessions are 20%, 30%, 30%, 45%, 50%, 60%, 70%, 80%. How would you describe the data?

- **A.** High variability with no pattern
- **B.** An increasing trend
- **C.** A decreasing trend
- **D.** No trend

12. To teach a client to identify the letter "b," you first make it bold and red, then gradually fade it to plain black text. This is an example of:

- **A.** A response prompt
- **B.** Response cost
- **C.** Stimulus fading
- **D.** Shaping

13. You realize you entered the wrong data for yesterday's session. Which core principle guides you to report and correct it?

- **A.** Treat others with compassion
- **B.** Maximize client independence
- **C.** Ensure your own competence
- **D.** Behave with integrity

14. During receptive identification trials, you always place the correct card on the left. The client gets 100% correct. What problem might this create?

- **A.** The client has fully mastered the target and can move to maintenance
- **B.** The client is relying on a model prompt from the instructor
- **C.** The client is experiencing an extinction burst on this target
- **D.** The client may be responding to the position rather than the picture

15. While helping with a standardized skills assessment, you notice the client can almost complete an item if you give a small gesture. What should you do?

- **A.** Skip that item entirely so it does not count against the client's score
- **B.** Give the small gesture and score the item as an independent correct response, since she almost had it
- **C.** Follow the assessment's instructions for prompting and scoring, and note the observation for your supervisor
- **D.** Change the item slightly to make it easier and then score the response

16. Two clients both bang their heads. For one, it is maintained by escape, and for the other by automatic reinforcement. What does this show?

- **A.** The same topography can serve different functions
- **B.** Function can be determined by the behavior's appearance
- **C.** Head-banging always has the same function
- **D.** Treatment should be identical for both clients

17. Which should NOT be included in an RBT's session note?

- **A.** The start and end times of the session
- **B.** The targets that were run and the data collected
- **C.** Any incidents that occurred during the session
- **D.** The RBT's opinion that the client may have ADHD

18. A parent tells you the client's school schedule is changing next week to earlier hours. What should you do?

- **A.** Assume it won't affect therapy
- **B.** Rearrange the therapy hours on your own to fit the new school schedule
- **C.** Document the change and inform your supervisor
- **D.** Tell the parent to call the BACB

19. A client stays seated for 10 seconds. The goal is 5 minutes. Your supervisor sets criteria of 20 seconds, then 40 seconds, then 1 minute, and so on. This is shaping across which dimension?

- **A.** Latency
- **B.** Force
- **C.** Duration
- **D.** Topography

20. In the attention condition of a functional analysis, what typically happens when the client engages in the target behavior?

- **A.** The therapist delivers brief attention, such as a statement of concern
- **B.** The therapist removes all task demands for a brief period, such as 30 seconds
- **C.** The therapist leaves the room for the rest of the session
- **D.** The client receives brief access to a preferred toy

21. Which behavior is best suited to a simple frequency (event) count?

- **A.** Throwing objects, where each throw has a clear beginning and end
- **B.** Crying that continues for varying lengths of time throughout the day
- **C.** Being engaged with a toy during free play
- **D.** Staying seated during circle time

22. A good operational definition of a target behavior should include:

- **A.** A clear description of the behavior with examples and non-examples
- **B.** The client's diagnosis, age, and relevant medical and educational history
- **C.** The underlying reasons the client engages in the behavior
- **D.** The RBT's opinion of how severe the behavior is overall

23. What distinguishes shaping from chaining?

- **A.** Shaping links separate behaviors into a sequence, while chaining gradually changes one behavior toward a target
- **B.** Shaping relies on punishment of errors, while chaining relies only on reinforcement
- **C.** Shaping reinforces successive approximations of one behavior, while chaining links separate behaviors into a sequence
- **D.** There is no real difference, since both terms describe the same teaching procedure

24. Your supervisor asks for duration data on tantrums. The definition says a tantrum begins with crying plus falling to the floor and ends after 10 seconds without either behavior. When do you stop the timer?

- **A.** When you feel the client has calmed down enough to return to work, based on your judgment
- **B.** When the session ends, so that the whole tantrum is captured
- **C.** As soon as the client stops crying for a moment, even if briefly
- **D.** When 10 seconds have passed with no crying or falling to the floor, per the definition

25. You present one item at a time and record whether the client approaches or engages with it. What kind of preference assessment is this?

- **A.** MSWO
- **B.** Single stimulus
- **C.** Free operant
- **D.** Paired stimulus

26. A client's teacher calls and asks you for details from the client's behavior plan. What should you do?

- **A.** Email the teacher a copy of the full behavior plan from your work account
- **B.** Refer the request to your supervisor, who will check whether consent to share exists
- **C.** Tell the teacher the client doesn't have a behavior plan to protect privacy
- **D.** Share everything she asks for, since the teacher also works with the client every school day

27. In baseline, a client's aggression averaged about 15 per session. Right after intervention started, it dropped to about 3 per session and stayed there. Which change is most evident?

- **A.** An increase in variability
- **B.** An increasing trend
- **C.** No change
- **D.** An immediate change in level

28. Why should reinforcement be delivered immediately after the target behavior during acquisition?

- **A.** Immediate reinforcement causes satiation, so a delay is needed
- **B.** A delay allows other behaviors to occur and be reinforced instead
- **C.** Immediacy only matters when reducing problem behavior
- **D.** Delayed reinforcement is always more effective for new skills

29. What is a task analysis?

- **A.** Breaking a complex skill into smaller, teachable steps in order
- **B.** Measuring how long it takes the client to finish a task
- **C.** Assessing why a problem behavior occurs across settings
- **D.** Identifying the client's most preferred items and activities

30. A family you work with speaks mainly Spanish, and you don't. What is the most appropriate action?

- **A.** Insist the family speak English during sessions to support the client
- **B.** Communicate with the family only through the client's 8-year-old sibling, who speaks both languages well
- **C.** Avoid talking with the family and send all updates home in English
- **D.** Talk with your supervisor about language support, such as an interpreter or translated materials

31. The client's occupational therapist suggests using a weighted vest during sessions. What should you do?

- **A.** Ask the parent to decide whether you should start using it
- **B.** Relay the suggestion to your supervisor and wait for direction
- **C.** Tell the OT that ABA doesn't use vests and continue the plan
- **D.** Start using the vest right away since the OT is a licensed professional

32. A client takes a long time to start working after being given a worksheet. The goal is to shorten this delay. Which measure fits the goal?

- **A.** Duration of the total time spent working on the worksheet
- **B.** Latency from the worksheet being given to the first pencil stroke
- **C.** Interresponse time between each completed worksheet problem
- **D.** Number of worksheet problems completed during the session

33. Which is an example of an effective supervision practice?

- **A.** The supervisor tells you to learn from online videos
- **B.** The supervisor only reviews your notes at the end of the year
- **C.** The supervisor directly observes you with a client and gives specific feedback
- **D.** The supervisor emails a new program to you without reviewing or modeling it with you

34. What is the primary purpose of a crisis or emergency plan?

- **A.** To keep the client and others safe using pre-planned, approved procedures
- **B.** To punish dangerous behavior so that it happens less often
- **C.** To teach new replacement skills while the crisis is happening
- **D.** To replace the behavior intervention plan during weeks when problem behavior is high

35. During natural environment training, you place a favorite toy in a clear container the client can't open. What is the purpose of this?

- **A.** To punish the client for playing with the toy for too long
- **B.** To create motivation for the client to request help or the toy
- **C.** To teach the client to wait quietly without asking for things
- **D.** To remove the toy as a reinforcer for the rest of the session

36. A client was taught to say "Hello." Without training, he starts saying "Hi" and "Hey" to greet people. This is an example of:

- **A.** Extinction
- **B.** Response generalization
- **C.** Stimulus generalization
- **D.** Maintenance

37. A client becomes less interested in the same sticker used as a reinforcer every trial. Which strategy should you discuss with your supervisor?

- **A.** Removing all reinforcement for the session
- **B.** Increasing the delay before delivering the sticker
- **C.** Varying the reinforcers used across trials
- **D.** Delivering the sticker before the response

38. Which is the most measurable definition of on-task behavior during independent seatwork?

- **A.** Paying attention to the teacher and trying hard on every problem
- **B.** Showing interest in the assignment, caring about getting it right, and trying to do her best work
- **C.** Eyes directed at the worksheet or teacher, and writing or manipulating assigned materials
- **D.** Being focused on learning and staying motivated throughout the work

39. You and another RBT recorded very different data on the same client and skill this week. What should you do?

- **A.** Stop collecting data until the next team meeting
- **B.** Keep your data and ignore the other RBT's
- **C.** Average the two sets of data
- **D.** Report the data inconsistency to your supervisor

40. Which schedule of reinforcement typically produces high, steady rates of responding with little pausing?

- **A.** Continuous reinforcement (CRF)
- **B.** Variable ratio (VR)
- **C.** Fixed interval (FI)
- **D.** Fixed ratio (FR)

41. A client hits her brother when he takes the tablet, and her parents give the tablet back to stop the hitting. What is the most likely function of hitting?

- **A.** Automatic reinforcement
- **B.** Attention
- **C.** Escape from demands
- **D.** Access to tangibles

42. When may an RBT use a punishment procedure?

- **A.** Only when it is written in the behavior plan and the RBT has been trained and cleared by the supervisor
- **B.** Whenever reinforcement-based procedures don't seem to be working well enough
- **C.** When a parent asks for it and signs a note giving permission for its use
- **D.** When the client engages in dangerous behavior and the RBT believes a punishment procedure will help keep everyone safe

43. You are starting with a new client who avoids you. What is the best first step to establish yourself as a conditioned reinforcer?

- **A.** Pair yourself with preferred items and activities without placing demands
- **B.** Wait until the client approaches you on their own
- **C.** Remove all preferred items so the client must come to you
- **D.** Begin with intensive demands right away to establish instructional control early

44. When should you complete your session note?

- **A.** At the end of the week, completing the notes for all of your sessions at the same time
- **B.** Only on the days when your supervisor specifically asks for it
- **C.** As soon as possible after the session, within the timeline set by your agency
- **D.** Whenever you have free time before the end of the billing month

45. Why is partial-interval recording often used for behaviors targeted for reduction?

- **A.** It requires the observer to watch only at the end of each interval, which saves a lot of time
- **B.** It gives an exact count of every response
- **C.** It tends to overestimate the behavior, so any real decrease is not overstated
- **D.** It measures how long each response lasts

46. For a client whose problem behavior is maintained by escape, the plan gives a 1-minute break every 5 minutes regardless of behavior. This antecedent strategy is:

- **A.** Noncontingent escape (NCR with breaks)
- **B.** Differential reinforcement of low rates
- **C.** Escape extinction
- **D.** Positive punishment

47. A client's parent sends you a friend request on your personal social media. What should you do?

- **A.** Politely decline and inform your supervisor
- **B.** Accept after the client is discharged next month
- **C.** Accept, since it's only online
- **D.** Accept but don't comment on posts

48. A parent complains to you that another RBT is often late to sessions. What should you do?

- **A.** Tell the parent you will share the concern and bring it to your supervisor
- **B.** Tell the parent it is not your place to discuss staff and change the subject politely
- **C.** Confront the other RBT yourself at the next team meeting
- **D.** Post about the lateness in the staff group chat so others know

49. Which statement belongs in an objective session note?

- **A.** The client seemed to be in a bad mood for most of today's session
- **B.** The client clearly has a problem with transitions from play to work and needs a new plan
- **C.** The client hit the RBT's arm 3 times during the transition from play to work
- **D.** The client was aggressive during transitions because she was tired

50. In a token economy, what is the best way to deliver a token after a correct response?

- **A.** At the end of the session, all at once
- **B.** Without saying anything to the client
- **C.** Only when the client asks for it
- **D.** Immediately, paired with specific praise

51. A client learned to ask for a break instead of screaming. When staff stop honoring break requests, screaming returns. This is:

- **A.** Behavioral contrast
- **B.** Stimulus generalization
- **C.** Resurgence
- **D.** Spontaneous recovery

52. In most-to-least prompting, what happens over successive trials?

- **A.** The instructor keeps using the same full physical prompt on every trial so errors never happen
- **B.** The instructor delays the prompt by 1 more second on each new trial
- **C.** The instructor starts with no prompt and adds more help only as needed
- **D.** The instructor starts with the most intrusive prompt and fades to less intrusive prompts

53. In forward chaining, how is the chain taught?

- **A.** The last step is taught first, and each earlier step is added one at a time once the later steps are mastered
- **B.** The first step is taught first, and each later step is added once the earlier steps are mastered
- **C.** All steps are taught on every trial, with prompts wherever needed
- **D.** Steps are taught in a random order so the client stays engaged

54. Why is differential reinforcement usually combined with extinction of the problem behavior?

- **A.** Because differential reinforcement increases problem behavior
- **B.** So that only the appropriate behavior produces the reinforcer
- **C.** Because extinction eliminates the need for reinforcement
- **D.** So the client receives reinforcement for both behaviors

55. Your agency asks you to start working with adults with brain injuries. You have only worked with young children with autism. What should you do?

- **A.** Tell your supervisor and get training before providing services to this population
- **B.** Refuse to ever work with adult clients in any setting at the agency
- **C.** Start services right away, since ABA principles are the same for every population you work with
- **D.** Ask the client's family to train you on the client's needs themselves

56. During extinction for attention-maintained whining, staff occasionally give in and respond. What is the likely result?

- **A.** Whining becomes more persistent and harder to extinguish
- **B.** Whining changes function to escape
- **C.** Whining decreases faster than with consistent extinction
- **D.** Nothing changes, because occasional attention has no effect

57. At the start of a session, the client seems lethargic and the parent says she had a fever last night. What is the best action?

- **A.** Double the task demands so that the client stays alert and engaged
- **B.** Give the client fever medication from the clinic's first aid kit
- **C.** Run the session as usual without noting anything, since she's here
- **D.** Follow agency illness policy, notify your supervisor, and document it

58. After a paired stimulus assessment, a client chose bubbles 90% of the time. What should you understand about this result?

- **A.** Bubbles are now guaranteed to function as a reinforcer for every skill taught
- **B.** Bubbles are the client's only possible reinforcer, so other items can be dropped
- **C.** Bubbles should be used as the reinforcer on every trial for the rest of the year, since preference won't change
- **D.** Bubbles are highly preferred, but whether they function as a reinforcer depends on whether they increase behavior

59. During a session, your client has a seizure and is unresponsive. What should you do?

- **A.** Wait to call anyone until you can reach your supervisor for direction
- **B.** Give the client a snack and some water to help them recover faster
- **C.** Follow the agency's medical emergency procedures, including calling emergency services if required
- **D.** Stay with the client, keep other clients away, and continue the session once the client wakes up

60. A client's screaming is maintained by escape. The plan teaches him to say "Break please" and gives a brief break when he asks. This is:

- **A.** Response cost
- **B.** Functional communication training (FCT)
- **C.** Differential reinforcement of low rates (DRL)
- **D.** Noncontingent reinforcement

61. A client has mastered labeling 20 animals. How should these targets usually be handled going forward?

- **A.** Never practice them again, since mastered skills don't need practice
- **B.** Continue teaching them with dense prompting and reinforcement every session so they aren't lost
- **C.** Move them to maintenance, practicing them occasionally mixed with acquisition targets
- **D.** Retest each of them as new acquisition targets at the start of every day

62. A client screams during worksheets. The plan starts with only 1 problem per worksheet and gradually increases the number as screaming stays low. This is:

- **A.** Demand fading
- **B.** Extinction
- **C.** DRO
- **D.** High-probability request sequence

63. In discrete-trial teaching, what is the purpose of the intertrial interval?

- **A.** A time to deliver the reinforcer for the response just completed
- **B.** A time to prompt the correct response before the next instruction
- **C.** A time to deliver the discriminative stimulus again if the client did not respond
- **D.** A brief pause that separates trials so each one has a clear beginning and end

64. A client waits for your gesture before responding even on well-learned targets. What problem is this, and what does it suggest?

- **A.** Stimulus overselectivity, which suggests adding more prompts on each target
- **B.** Satiation, which suggests withholding reinforcement until he responds
- **C.** Prompt dependency, which suggests prompts need to be faded more systematically
- **D.** Generalization, which suggests teaching fewer targets at the same time

65. Your supervisor asks you to observe a client during recess and record how often he initiates play with peers. This contributes to which type of assessment?

- **A.** A preference assessment
- **B.** A permanent product assessment
- **C.** A social skills assessment
- **D.** A functional analysis

66. A teacher disagrees with how you handle a client's behavior in class. What shows good interpersonal skills?

- **A.** Listen actively, acknowledge her concerns, and share them with your supervisor
- **B.** Keep discussing it with the teacher after class until she understands and agrees with your approach
- **C.** Tell the teacher she isn't trained in ABA and should defer to you
- **D.** Ignore the teacher's comments and continue with the session plan

67. Your supervisor wants to increase a client's sustained on-task behavior and asks for a measure that will not overestimate it. Which method is the best fit?

- **A.** Latency recording
- **B.** Partial-interval recording
- **C.** Whole-interval recording
- **D.** Frequency recording

68. At the end of a session, a client gives you a drawing she made for you. Your employer has no gift policy. What should you do?

- **A.** Accept it graciously, since it has little monetary value and expresses gratitude
- **B.** Accept it, and then offer the family money to cover the materials used
- **C.** Refuse it politely, because RBTs can never accept any gifts from client families under the code
- **D.** Accept it only if the family is fully paid up for their ABA services

69. You use 30-second momentary time sampling for a client's hand-flapping. In one interval, the client flaps at second 12 and stops at second 20. At second 30, she is not flapping. How do you score this interval?

- **A.** Scored as a partial occurrence
- **B.** Recorded as 8 seconds of flapping
- **C.** Not scored as an occurrence
- **D.** Scored as an occurrence

70. According to the RBT Ethics Code, how long must an RBT wait after a professional relationship with a client's parent ends before entering a romantic relationship with that parent?

- **A.** At least two years
- **B.** There is no required waiting period
- **C.** Six months
- **D.** One month

71. During DTT, you give the instruction "Touch cup," but the client doesn't respond. Which action best follows good DTT practice?

- **A.** Repeat "Touch cup" several more times, a little louder each time, until the client finally responds
- **B.** Change the instruction to "Can you please touch the cup for me?"
- **C.** Follow the program's prompting procedure instead of repeating the instruction over and over
- **D.** End the session, since the client is clearly not ready to work

72. Which target behavior could NOT be measured through permanent product recording?

- **A.** Greeting a peer by saying "Hi"
- **B.** Number of letters traced on a worksheet
- **C.** Number of dishes placed in the dishwasher
- **D.** Number of blocks stacked into a tower

73. You will be starting a new crisis procedure next week and feel unsure about it. What should you do?

- **A.** Read over the written procedure once the night before you start
- **B.** Ask your supervisor for training and practice before you need to use it
- **C.** Wait and figure out the procedure during the first crisis that comes up
- **D.** Ask another RBT on the case to handle all crises for this client

74. A client writes on the wall and is required to clean the entire wall. Writing on walls decreases. This is an example of:

- **A.** Negative punishment
- **B.** Extinction
- **C.** Negative reinforcement
- **D.** Positive punishment

75. Using partial-interval recording, the behavior was scored in 12 of 40 intervals. What should you report?

- **A.** The behavior occurred 12 times
- **B.** The behavior occurred in 30% of intervals
- **C.** The behavior occurred 30% of the time
- **D.** The behavior lasted 12 minutes

76. Your only BACB-qualified supervisor leaves the agency, and no new supervisor has been assigned. What should you do?

- **A.** Continue sessions as usual for the next few months while the agency hires
- **B.** Have the clinic's office manager supervise your sessions in the meantime
- **C.** Continue sessions and have the parents sign off on each session note
- **D.** Stop providing RBT services until a qualified supervisor is in place

77. Which public statement by an RBT is appropriate?

- **A.** "With my help, your child's autism can be cured in about six months."
- **B.** "I'm a certified behavior analyst."
- **C.** "I design and run my own ABA programs."
- **D.** "I work under BCBA supervision to implement treatment plans."

78. A client's father tells you that his son's tantrums at home have gotten much worse this week. What should you do?

- **A.** Create a home behavior plan for him
- **B.** Share the information with your supervisor promptly
- **C.** Wait to see if tantrums increase in session too
- **D.** Tell him it is probably just a phase

79. Which best describes a discriminative stimulus (SD)?

- **A.** A stimulus delivered right after a response to increase it
- **B.** A stimulus that automatically causes a reflexive response
- **C.** A stimulus that signals reinforcement is not available for a response
- **D.** A stimulus that signals reinforcement is available for a specific response

80. In a multiple stimulus with replacement (MSW) assessment, what happens after the client selects an item?

- **A.** Only two of the items are presented together on the next trial
- **B.** The client keeps the selected item for the rest of the session
- **C.** The selected item is permanently removed from the array for the next trials
- **D.** The selected item stays in the array and the other items are replaced

81. Right before a session, the client just finished a large bag of chips at lunch. Why might chips not work as a reinforcer this session?

- **A.** The client is deprived of chips
- **B.** Recent access has reduced their value (satiation)
- **C.** Chips were identified in the preference assessment
- **D.** Chips are an unconditioned reinforcer

82. A client used to work hard for tokens, but lately tokens aren't increasing behavior. Staff have stopped allowing exchanges for backup reinforcers. What is the most likely reason?

- **A.** The tokens are now discriminative stimuli signaling extinction
- **B.** The tokens have now become unconditioned reinforcers for the client
- **C.** The client's work behavior has been punished by staff during recent sessions at the clinic
- **D.** The tokens lost value because they were no longer paired with backup reinforcers

83. A client's hand-mouthing is maintained by automatic reinforcement (the sensation). The plan has the client wear soft gloves during certain activities. This is an example of:

- **A.** Sensory extinction
- **B.** Positive punishment
- **C.** Noncontingent attention
- **D.** Response cost

84. You finish a home session and need to carry paper data sheets back to the clinic. What is the best practice?

- **A.** Leave them on the passenger seat of your car overnight and drop them off tomorrow
- **B.** Take photos of the sheets and text them to your supervisor from your phone
- **C.** Keep them secured and out of sight, and bring them directly to the clinic
- **D.** Throw them away once you've memorized the data so nothing gets lost

85. You have several questions for your supervisor. Which should you prioritize?

- **A.** A question about next month's schedule
- **B.** A concern about the client's safety
- **C.** A question about a new toy for reinforcement
- **D.** A request for feedback on your handwriting

RBT Mock Exam 2: Answer Sheet

The Stimulus Control Room

Name: _____ **Date:** _____

Fill in one bubble per question completely, then enter your answers online at the link in your email.

1. Ⓐ Ⓑ Ⓒ Ⓓ	30. Ⓐ Ⓑ Ⓒ Ⓓ	59. Ⓐ Ⓑ Ⓒ Ⓓ
2. Ⓐ Ⓑ Ⓒ Ⓓ	31. Ⓐ Ⓑ Ⓒ Ⓓ	60. Ⓐ Ⓑ Ⓒ Ⓓ
3. Ⓐ Ⓑ Ⓒ Ⓓ	32. Ⓐ Ⓑ Ⓒ Ⓓ	61. Ⓐ Ⓑ Ⓒ Ⓓ
4. Ⓐ Ⓑ Ⓒ Ⓓ	33. Ⓐ Ⓑ Ⓒ Ⓓ	62. Ⓐ Ⓑ Ⓒ Ⓓ
5. Ⓐ Ⓑ Ⓒ Ⓓ	34. Ⓐ Ⓑ Ⓒ Ⓓ	63. Ⓐ Ⓑ Ⓒ Ⓓ
6. Ⓐ Ⓑ Ⓒ Ⓓ	35. Ⓐ Ⓑ Ⓒ Ⓓ	64. Ⓐ Ⓑ Ⓒ Ⓓ
7. Ⓐ Ⓑ Ⓒ Ⓓ	36. Ⓐ Ⓑ Ⓒ Ⓓ	65. Ⓐ Ⓑ Ⓒ Ⓓ
8. Ⓐ Ⓑ Ⓒ Ⓓ	37. Ⓐ Ⓑ Ⓒ Ⓓ	66. Ⓐ Ⓑ Ⓒ Ⓓ
9. Ⓐ Ⓑ Ⓒ Ⓓ	38. Ⓐ Ⓑ Ⓒ Ⓓ	67. Ⓐ Ⓑ Ⓒ Ⓓ
10. Ⓐ Ⓑ Ⓒ Ⓓ	39. Ⓐ Ⓑ Ⓒ Ⓓ	68. Ⓐ Ⓑ Ⓒ Ⓓ
11. Ⓐ Ⓑ Ⓒ Ⓓ	40. Ⓐ Ⓑ Ⓒ Ⓓ	69. Ⓐ Ⓑ Ⓒ Ⓓ
12. Ⓐ Ⓑ Ⓒ Ⓓ	41. Ⓐ Ⓑ Ⓒ Ⓓ	70. Ⓐ Ⓑ Ⓒ Ⓓ
13. Ⓐ Ⓑ Ⓒ Ⓓ	42. Ⓐ Ⓑ Ⓒ Ⓓ	71. Ⓐ Ⓑ Ⓒ Ⓓ
14. Ⓐ Ⓑ Ⓒ Ⓓ	43. Ⓐ Ⓑ Ⓒ Ⓓ	72. Ⓐ Ⓑ Ⓒ Ⓓ
15. Ⓐ Ⓑ Ⓒ Ⓓ	44. Ⓐ Ⓑ Ⓒ Ⓓ	73. Ⓐ Ⓑ Ⓒ Ⓓ
16. Ⓐ Ⓑ Ⓒ Ⓓ	45. Ⓐ Ⓑ Ⓒ Ⓓ	74. Ⓐ Ⓑ Ⓒ Ⓓ
