RBT Mock Exam 3

The Stimulus Control Room

Name: _____ **Date:** _____

Instructions

This practice exam has **85 multiple-choice questions** modeled on the BACB RBT Test Content Outline (3rd ed.). Like the real exam, **75 questions are scored** and 10 are unscored pilot questions mixed in; you won't know which ones. You have **90 minutes**.

Each question has four choices (A to D). Choose the **one best answer**. Mark your answers on the answer sheet on the last page, then submit them online at the link in your email. Your score and the answer key with explanations will be sent after your answers and short survey are received.

Work without notes or outside help so your score reflects real exam readiness.

Content covered

Domain	Topic
A	Data Collection and Graphing
B	Behavior Assessment
C	Behavior Acquisition
D	Behavior Reduction
E	Documentation and Reporting
F	Ethics

1. A client engages in self-injury. The plan gives a reinforcer after every 3 minutes with no self-injury. This is:
   - **A.** Differential reinforcement of alternative behavior (DRA)
   - **B.** Functional communication training (FCT)
   - **C.** Noncontingent reinforcement (NCR)
   - **D.** Differential reinforcement of other behavior (DRO)

2. Which is the best operational definition of a tantrum for data collection?
   - **A.** Crying, screaming, or dropping to the floor for 5 or more seconds; ends after 30 seconds without these behaviors
   - **B.** Whenever the client is not getting her way and reacts with strong emotions
   - **C.** Emotional outbursts that seem excessive for the situation or the client's age
   - **D.** Any time the client becomes upset, frustrated, or overwhelmed during the session, as judged by the RBT

3. Which supervision arrangement is NOT allowed under the RBT Ethics Code?
   - **A.** The supervisor provides feedback during direct observation
   - **B.** The supervisor is a BCBA employed by the same agency
   - **C.** The RBT employs their own supervisor
   - **D.** The RBT meets with the supervisor regularly

4. A client often refuses tasks. The plan lets him choose the order of his tasks. Which type of intervention is this?
   - **A.** Extinction procedure
   - **B.** Antecedent intervention
   - **C.** Consequence intervention
   - **D.** Punishment procedure

5. In a small town, a client's parent is also your child's teacher. The relationship can't be avoided. What reduces the risk?
   - **A.** Pretend you don't know the parent whenever you see each other at school
   - **B.** Ask the teacher for special attention for your child in exchange for help
   - **C.** Discuss the client's progress with the parent informally at school pickup, since it's convenient
   - **D.** Tell your supervisor, keep interactions professional in each role, and document the plan

6. Why is it important to identify the function of a behavior before choosing an intervention?
   - **A.** Interventions matched to function are more likely to work
   - **B.** All behaviors have the same function
   - **C.** Function only matters for data collection
   - **D.** The function determines the client's diagnosis and service hours

7. Why should data be entered and graphs updated promptly after each session?
   - **A.** So the graph looks complete and up to date if the agency is audited by a payer
   - **B.** So the RBT can decide on their own when to change the program
   - **C.** So the supervisor can make timely, data-based decisions about treatment
   - **D.** Because graphs are mainly used at the annual treatment review

8. Your supervisor asks you to intersperse mastered targets with new targets during DTT. What is the main purpose?
   - **A.** To eliminate the need to teach any new targets in future sessions
   - **B.** To keep reinforcement high and maintain the client's motivation
   - **C.** To replace the error correction procedure for incorrect responses
   - **D.** To make the task harder so the client learns to tolerate confusion

9. After a skill is learned with continuous reinforcement, why would your supervisor thin the schedule?
   - **A.** To help the behavior maintain and resemble natural contingencies
   - **B.** To reduce the client's motivation so that sessions run more smoothly
   - **C.** To speed up extinction of the skill once it is no longer needed
   - **D.** To punish the client for taking too long to learn the new skill

10. A client covers her ears and screams during loud school assemblies. The plan has her wear noise-reducing headphones before assemblies start. This is an example of:
    - **A.** Extinction of screaming during school assemblies
    - **B.** Differential reinforcement of low rates (DRL) of screaming during assemblies
    - **C.** Modifying the antecedent to reduce the motivation for problem behavior
    - **D.** Positive punishment of covering her ears

11. During a home session, you see signs that suggest a client may be experiencing abuse. What should you do?
    - **A.** Confront the parents privately about what you saw at the end of the session before reporting
    - **B.** Wait to see if more signs appear before telling anyone about it
    - **C.** Keep it confidential to protect the family's privacy and trust
    - **D.** Follow mandated reporting laws and agency policy, and notify your supervisor

12. What is the main goal of errorless learning procedures?
    - **A.** To avoid reinforcement until mastery
    - **B.** To let the client practice errors
    - **C.** To eliminate all prompts starting from the very first teaching trial
    - **D.** To minimize errors while the client learns a new skill

13. A family offers to buy you lunch ($15) every Friday as thanks. Your employer has no gift policy. What should you do?

- **A.** Accept, but only on Fridays so that it stays occasional
- **B.** Accept, since lunch is a small gesture, and mention the lunches at your annual review
- **C.** Accept, since the gift is food and not money or a gift card
- **D.** Politely decline, since this exceeds the gift limit in the RBT Ethics Code

14. A client eats very quickly and sometimes chokes. The goal is to increase the time between bites. Which measure is most useful?

- **A.** Frequency
- **B.** Interresponse time (IRT)
- **C.** Latency
- **D.** Whole-interval recording

15. In a functional analysis, what is the purpose of the play (control) condition?

- **A.** To test whether escape from task demands is what maintains the client's problem behavior
- **B.** To provide a comparison condition with free access to attention and toys and no demands
- **C.** To teach the client new play skills during the assessment session
- **D.** To punish problem behavior that happens during play activities

16. During intervention for self-injury, which data pattern would show that the intervention is working as intended?

- **A.** An increasing trend in self-injury
- **B.** A decreasing trend in self-injury across sessions
- **C.** Stable self-injury at the baseline level
- **D.** Highly variable self-injury with no pattern

17. Why must extinction be applied consistently by all caregivers and staff?

- **A.** Because extinction procedures only work when used in clinic settings
- **B.** Inconsistent use can reinforce the behavior intermittently, making it harder to reduce
- **C.** Because extinction is a punishment procedure that requires consent
- **D.** Because consistent use by several people tends to increase problem behavior permanently

18. A client climbs on shelves. Each time, a caregiver firmly says "No!" Climbing decreases. The reprimand functioned as:

- **A.** Positive punishment
- **B.** Positive reinforcement
- **C.** Extinction
- **D.** Negative punishment

19. You realize that for the past week you have been running a procedure incorrectly. What should you do?

- **A.** Wait until your next scheduled supervision to mention it
- **B.** Tell your supervisor right away and ask for retraining
- **C.** Quietly correct it and say nothing
- **D.** Change last week's data to reflect the correct procedure

20. A client started attending a new daycare this week, and you notice more crying in sessions. What is the best action?

- **A.** Document both the daycare change and the crying data, and report them to your supervisor
- **B.** Suggest the parent take the child out of daycare until the crying improves
- **C.** Stop running the programs that seem to produce crying until it improves
- **D.** Assume the crying is unrelated to the daycare change and keep running sessions as usual

21. A session was scheduled for 2:00 to 4:00, but it started at 2:20. What times should you document?

- **A.** The scheduled times, because that's what was authorized
- **B.** Whatever times the parent requests
- **C.** The actual start and end times of the session
- **D.** The times that maximize billable hours

22. Session 1: 30 responses in 60 minutes. Session 2: 15 responses in 20 minutes. Which session had the higher rate?

- **A.** Session 1 (0.5 per minute)
- **B.** They are equal
- **C.** Session 2 (0.75 per minute)
- **D.** Session 1 (30 per minute)

23. What is a key advantage of permanent product recording?

- **A.** It works equally well for every type of target behavior
- **B.** It shows the function of the behavior without needing an FBA
- **C.** It measures exactly how long each instance of the behavior lasted during the session
- **D.** The behavior can be measured after it occurs, without observing it directly

24. What is a main advantage of backward chaining?

- **A.** No prompting is required at any point during the teaching process
- **B.** The client completes the last step and contacts the terminal reinforcer on every trial
- **C.** The client performs all steps of the chain on every single trial
- **D.** The client learns the first step first and then adds each remaining step in forward order

25. A client screams to get candy at the store. What would extinction look like?

- **A.** Not providing the candy when the client screams
- **B.** Giving the candy quickly so the screaming stops and the family can leave
- **C.** Scolding the client each time
- **D.** Leaving the store with the client

26. Using 10-second whole-interval recording, a client is on-task for the first 8 seconds of an interval and then looks away. How is that interval scored?

- **A.** Scored only if the client returns to task by second 10
- **B.** Scored as 80%
- **C.** Not scored
- **D.** Scored

27. During snack time, you hold up the juice box and wait for the client to say "juice" before giving it. What type of teaching is this?

- **A.** Backward chaining
- **B.** Noncontingent reinforcement
- **C.** Discrete-trial teaching of a tact (label)
- **D.** Naturalistic teaching of a mand (request)

28. You place the correct picture closer to the client than the other pictures. What type of prompt is this?

- **A.** A verbal prompt
- **B.** A model prompt
- **C.** A positional (stimulus) prompt
- **D.** A partial physical (response) prompt

29. Your supervisor asks you to help reassess a client's skills before a treatment plan update. Why is reassessment done?

- **A.** To confirm the client's diagnosis
- **B.** To decide the client's insurance coverage
- **C.** To evaluate the RBT's performance
- **D.** To measure progress and identify new goals

30. In a functional analysis, which condition is designed to test for automatic reinforcement?

- **A.** Tangible condition
- **B.** Alone or no-interaction condition
- **C.** Escape condition
- **D.** Attention (social disapproval) condition

31. In a paired stimulus assessment, why do you alternate which side (left or right) each item appears on?

- **A.** To control for a side bias so choices reflect preference, not position
- **B.** To make the assessment go faster by reducing the number of trials
- **C.** To keep the client from seeing both items at the same time
- **D.** To teach the client left and right while assessing preferences

32. What is a main advantage of naturalistic teaching approaches?

- **A.** They do not use reinforcement, so satiation is never an issue
- **B.** They require no data collection, so there's more time for teaching
- **C.** Skills are more likely to generalize to everyday settings
- **D.** They are always faster than DTT for teaching any new skill

33. Which describes an acquisition procedure?

- **A.** Occasionally probing a mastered target
- **B.** Thinning reinforcement for a skill the client mastered several months ago
- **C.** Teaching a new target with prompts and a dense reinforcement schedule
- **D.** Mixing mastered targets into play activities

34. A client says "Hi!" and hugs everyone, including strangers in the store. What does your supervisor likely need to teach?

- **A.** More generalization of hugging to additional people
- **B.** Extinction of all greetings in every community setting
- **C.** Chaining of the steps involved in greeting someone
- **D.** Discrimination between familiar people and strangers

35. You notice you are judging a family's parenting style because it differs from how you were raised. What reflects cultural humility?

- **A.** Tell the family how they should parent based on your own experience
- **B.** Request a new client whose family has values similar to yours
- **C.** Recognize the bias, reflect on it, and discuss it with your supervisor
- **D.** Ignore the feeling and say nothing to anyone about it

36. The client learned to ask for help using a specific picture card at the clinic. Your supervisor asks you to bring that same card to home sessions. Which generalization strategy is this?

- **A.** Training loosely
- **B.** Programming common stimuli
- **C.** Stimulus fading
- **D.** Sequential modification

37. A parent tells you the family will be moving to a new home next month. What should you do?

- **A.** Document it and let your supervisor know
- **B.** Tell the parent to delay the move
- **C.** Ignore it because it's personal information
- **D.** Stop services until after the move

38. A client's data across 7 sessions are 5, 6, 5, 5, 6, 5, 5. How would you describe the data?

- **A.** Stable
- **B.** An increasing trend
- **C.** A decreasing trend
- **D.** Highly variable

39. Which is an example of an unconditioned reinforcer?

- **A.** A token that can be traded for toys
- **B.** A sticker for a child who collects them
- **C.** Water for a thirsty client
- **D.** Praise from a favorite teacher

40. A client scratches a mosquito bite, which temporarily relieves the itch. What function does scratching serve?

- **A.** Social negative reinforcement
- **B.** Social positive reinforcement
- **C.** Automatic negative reinforcement
- **D.** Access to tangibles

41. Before a trial-based preference assessment, what is a common step?

- **A.** Let the client briefly sample each item
- **B.** Remove all items from the room for a week
- **C.** Present only one item per session
- **D.** Ask the client's parents to choose the items

42. A student reinforced only when at least 10 minutes have passed since her last trip to the pencil sharpener is being taught with:

- **A.** Resetting DRO
- **B.** Spaced-responding DRL
- **C.** Noncontingent reinforcement
- **D.** DRI

43. You and a coworker are at a busy coffee shop discussing a difficult client by first name. What is the problem?

- **A.** There is no problem, since you didn't use the last name
- **B.** It is only a problem if you're on the clock
- **C.** It is only a problem if the client's parents are there
- **D.** Others could overhear confidential client information

44. In a free operant preference assessment, what do you record?

- **A.** How many times the client requests each of the items during the observation session
- **B.** Which items the client consumes first when given a choice
- **C.** Which item the client picks when items are presented in pairs
- **D.** How much time the client spends engaged with each freely available item

45. Your new supervisor is also your roommate. What should you do?

- **A.** Inform agency management and document efforts to address the multiple relationship
- **B.** Keep it private, since the relationship doesn't affect your work or your supervisor's objectivity
- **C.** Ask your roommate to be extra strict with you so there's no favoritism
- **D.** Quit your job immediately so that the conflict of interest ends

46. On a fixed interval 2-minute (FI 2) schedule, when is reinforcement delivered?

- **A.** Every 2 minutes, whether or not a response occurs
- **B.** After an average of 2 minutes
- **C.** After every second response
- **D.** For the first response after 2 minutes have passed

47. Your client has been earning a break after 3 tokens for several weeks and is doing well. What change might your supervisor make next?

- **A.** Stop giving tokens without warning
- **B.** Give tokens without requiring the target behavior
- **C.** Gradually increase the number of tokens required for exchange
- **D.** Replace all of the backup reinforcers with praise immediately, starting at the next session

48. What is a main advantage of the MSWO preference assessment compared to the paired stimulus format?

- **A.** It identifies the function of problem behavior
- **B.** It works only for edible items
- **C.** It never requires removing items
- **D.** It produces a preference ranking in less time

49. Which action best reflects the core principle of benefiting others?

- **A.** Following whatever the parent wants, even if harmful
- **B.** Choosing programs that are easiest for the RBT
- **C.** Keeping sessions short to have more free time
- **D.** Prioritizing the client's welfare when making decisions

50. Your supervisor wants to know how long a client stays in the bathroom each time he goes. Which measure should you use?

- **A.** Latency
- **B.** Total count per day
- **C.** Duration per occurrence
- **D.** Momentary time sampling

51. Which ABC entry is written objectively?

- **A.** A: Client was annoyed. B: Client acted out. C: Teacher handled it.
- **B.** A: Teacher said "Clean up." B: Client threw blocks. C: Teacher said "Okay, I'll do it."
- **C.** A: Client didn't want to clean up. B: Client was defiant and upset. C: Teacher gave in to her.
- **D.** A: Bad mood. B: Tantrum. C: Nothing.

52. A client earns a 2-minute break from work after completing 3 problems, and problem completion increases. What type of reinforcement is this?

- **A.** Extinction
- **B.** Negative reinforcement
- **C.** Negative punishment
- **D.** Positive reinforcement

53. How should an RBT's competence to implement a procedure be established?

- **A.** The supervisor observes the RBT and confirms correct implementation
- **B.** The RBT has read about the procedure in a textbook or article
- **C.** The RBT reports that they feel confident implementing it
- **D.** The client's parent approves of the RBT's work in the home

54. Why should you record the length of the observation period along with your frequency count?

- **A.** So the supervisor knows exactly how much time to bill to the payer for that particular session
- **B.** So the data can be graphed as a duration instead of as a count
- **C.** Because frequency counts must always be converted into percentages
- **D.** So the count can be converted to a rate and compared across sessions of different lengths

55. A child hits his sibling, and the TV is turned off for 5 minutes. Hitting decreases. This is an example of:

- **A.** Extinction
- **B.** Negative reinforcement
- **C.** Positive punishment
- **D.** Negative punishment

56. A client says "cookie" when shown a cookie, but not when shown a cracker. This shows that saying "cookie" is:

- **A.** A conditioned reinforcer
- **B.** A generalization error
- **C.** Under stimulus control
- **D.** On an extinction schedule

57. A school aide tells you that your client has started a new behavior at school. What should you do?

- **A.** Start an intervention for the new behavior during your next session
- **B.** Ignore it until you see it in session
- **C.** Tell the aide to handle it at school
- **D.** Share the report with your supervisor in a timely manner

58. Your supervisor collects data at the same time as you to calculate interobserver agreement (IOA). What is the main purpose?

- **A.** To replace the need for operational definitions of target behaviors
- **B.** To evaluate the client's diagnosis and current level of functioning
- **C.** To decide which of the two observers is the better RBT for the case
- **D.** To check whether the data are being recorded consistently and reliably

59. During a skills assessment, the client is unusually tired and refuses many items. What should you do?

- **A.** Follow the assessment instructions and note the client's condition for your supervisor
- **B.** Score the refused items as mastered so the client's fatigue doesn't lower the overall results
- **C.** Give the client extra prompts on every remaining item to help
- **D.** Complete the refused items yourself so the assessment is finished

60. Before using a new procedure with a client, your supervisor has you practice it with her while she gives feedback. Which part of behavioral skills training is this?

- **A.** Rehearsal
- **B.** Modeling
- **C.** Instructions
- **D.** Observation only

61. A client's grandmother tells you she gives him candy whenever he cries so he'll calm down. What should you do?

- **A.** Train the grandmother on using extinction for crying yourself
- **B.** Say nothing about it, since it happens outside of your sessions
- **C.** Tell your supervisor, since this may affect the client's behavior and the plan
- **D.** Tell the grandmother directly that she is undermining the treatment and needs to stop

62. Using total task chaining for toothbrushing, the client does steps 1 to 3 independently but needs help with step 4. What should you do?

- **A.** Prompt only step 4, then let the client continue with the remaining steps
- **B.** Skip step 4 for now and move on to step 5 so the chain keeps moving
- **C.** Start the whole chain over from step 1 each time the client needs help
- **D.** Prompt every step, including steps 1 to 3, to keep responding consistent

63. You disagree with a procedure your supervisor has written, but it poses no immediate safety risk. What should you do first?

- **A.** Discuss your concern respectfully with your supervisor
- **B.** Stop using the procedure until it is changed
- **C.** Report your supervisor to the BACB right away so the concern is documented
- **D.** Share your concern with the client's parents

64. During DTT, when is the best time to record data for each trial?

- **A.** Before presenting the discriminative stimulus for the next trial in the program
- **B.** Right after the trial, during the intertrial interval
- **C.** Only for incorrect trials
- **D.** At the end of the session from memory

65. Using 10-second partial-interval recording, a client throws an item three separate times within one interval. How is that interval scored?

- **A.** As three scored intervals
- **B.** As not scored, because the behavior was not continuous
- **C.** As one scored interval
- **D.** As 30% of the interval

66. Your agency posts a video of a client's progress on its website with written consent. Can you share it on your personal social media?

- **A.** Yes, as long as you add a positive comment about the client's progress and don't tag the family
- **B.** No, because RBTs must not share client identifying information on their own social media
- **C.** Yes, because the agency already posted it publicly with consent
- **D.** Yes, if the video is shorter than 30 seconds and doesn't show the face

67. During shaping, what happens to previous approximations once the client reliably produces the next approximation?

- **A.** They continue to be reinforced forever
- **B.** They are no longer reinforced
- **C.** They are reinforced more than the new approximation
- **D.** They are punished

68. In progressive time delay, how does the delay change?

- **A.** The instruction is delayed until the client signals that they are ready to start working
- **B.** The prompt is presented a few seconds before the instruction
- **C.** The delay stays the same fixed length of time on every trial
- **D.** The time between the instruction and the prompt gradually increases across trials

69. A client independently completed 5 of 8 steps in a handwashing task analysis. What percentage of steps were completed independently?

- **A.** 62.5%
- **B.** 58%
- **C.** 80%
- **D.** 50%

70. During a parent meeting, what best demonstrates active listening?

- **A.** Planning your response while they are still describing their concern
- **B.** Summarizing the parent's concerns back to them to confirm understanding
- **C.** Interrupting to explain the correct ABA terms for what they describe
- **D.** Checking your phone for notes while the parent is still talking

71. Which job title on an RBT's professional profile is accurate?

- **A.** Licensed Behavior Analyst
- **B.** Behavior Specialist, BCBA
- **C.** Registered Behavior Technician (RBT)
- **D.** Board Certified Behavior Analyst in training

72. A parent asks you to do a procedure differently than the behavior plan states. What should you do?

- **A.** Continue following the plan and contact your supervisor about the parent's request
- **B.** Stop the session until the parent and supervisor can meet together
- **C.** Do what the parent asks, since it's their child and their decision
- **D.** Explain to the parent why the plan is correct and why their request can't be followed

73. Which is the most appropriate way to document a crisis incident?

- **A.** Summarize the client's emotional state and likely motives before and during the incident
- **B.** Wait until you've spoken with the parents before writing anything down
- **C.** Record only the final outcome of the incident, without the lead-up
- **D.** Describe what happened before, during, and after the incident in objective, observable terms

74. Which target behavior passes the "dead man's test" (something a dead man could not do)?

- **A.** Not hitting peers
- **B.** Staying quiet during class
- **C.** Raising a hand to request help
- **D.** Not leaving the seat

75. A client says "mmm" to request more. You have been reinforcing "mmm." Using shaping, what should you reinforce next?

- **A.** Silence
- **B.** A closer approximation, such as "mo"
- **C.** Any sound, including crying
- **D.** Only the complete, correctly pronounced word "more"

76. A client's vocal stereotypy occurs at a very high rate, and you are running other programs at the same time. Which method will most likely give usable data with the least disruption?

- **A.** Duration of every episode
- **B.** Continuous frequency count
- **C.** Interresponse time recording
- **D.** Momentary time sampling

77. A client now asks for attention appropriately using FCT but asks every few seconds. Your supervisor plans to gradually teach the client to wait before attention is given. Why?

- **A.** To punish the client for asking for attention more often than caregivers would like
- **B.** To thin the reinforcement schedule to a level caregivers can maintain
- **C.** To gradually extinguish the new communication response
- **D.** Because FCT has failed and a new procedure is needed

78. A child who is often spanked at home starts hitting peers at school. Which side effect of punishment does this illustrate?

- **A.** Modeling of punishment
- **B.** Stimulus control
- **C.** Resurgence
- **D.** Extinction burst

79. Which is the best objective rewrite of "The client was defiant during work"?

- **A.** The client didn't feel like working today and refused most instructions
- **B.** The client was difficult and oppositional during most of the work period
- **C.** The client said "No" and pushed materials away after 4 of 6 instructions
- **D.** The client had an attitude today and wouldn't cooperate with demands

80. When extinction begins for a client's attention-maintained whining, he also starts hitting. This is an example of:

- **A.** Extinction-induced aggression
- **B.** Response generalization
- **C.** Spontaneous recovery
- **D.** Negative reinforcement

81. A client becomes aggressive toward peers. The crisis plan calls for a physical hold, but you have not been trained in it. What should you do?

- **A.** Use approved non-physical strategies from the plan, such as moving peers away, and get trained staff
- **B.** Leave the client alone in the room, close the door, and wait outside for trained help to arrive
- **C.** Restrain the client using a method you saw in an online training video
- **D.** Perform the physical hold as best you can, since safety comes first

82. To establish praise as a conditioned reinforcer, how should it be paired with an existing reinforcer?

- **A.** Deliver praise only at times when the established reinforcer is unavailable
- **B.** Deliver praise immediately before or with the established reinforcer
- **C.** Deliver praise only after problem behavior
- **D.** Deliver praise several minutes after the reinforcer

83. A client runs out of the bathroom every time he is asked to brush his teeth, and the toothbrushing is dropped. What is the most likely function?

- **A.** Access to tangibles
- **B.** Attention
- **C.** Escape
- **D.** Automatic positive reinforcement

84. Which is an example of meeting workplace requirements for session documentation?

- **A.** Using your own note format because it's faster and easier to complete
- **B.** Using the agency's required note template and submitting it by the deadline
- **C.** Submitting notes whenever you remember, as long as it's that month
- **D.** Writing notes in a personal notebook you keep at home for your records

85. A parent asks you to start working on toilet training during sessions. What is the appropriate response?

- **A.** Tell the parent you will pass the request to your supervisor
- **B.** Search online for a toilet training protocol
- **C.** Tell the parent that toilet training isn't part of ABA, so they should ask the pediatrician
- **D.** Start toilet training at the next session

RBT Mock Exam 3: Answer Sheet

The Stimulus Control Room

Name: _____ **Date:** _____
